

## DEMAND AND SUPPLY — FUSIBLE PIPE AND EQUIPMENT EXPANDS HD SUPPLY WATERWORKS' TRENCHLESS OFFERING

HD Supply Waterworks gives a great interview in this article in Trenchless Technology discussing their rise in the trenchless and fusible pipe industry and the expansion of their fusible piping solutions. They're bracing themselves for a very promising future in HDPE as it replaces many of the country's aging infrastructures. We especially love this TracStar® lineup!

# SADDLE FUSION MADE EASY

## THE MCELROY SIDEWINDER<sup>®</sup>

The McElroy Sidewinder fusion machines saddle fuse 4" IPS and smaller branch saddles, tapping tees and service saddle fittings onto 1 ¼" to 4" IPS mains. The Sidewinder is available with a Jaw Clamp or a Chain Clamp. The Chain Clamp Sidewinder gives you the ability to fuse onto mains larger than 4" IPS. Both Sidewinders are DataLogger<sup>®</sup> compatible.

# FLEXIBILITY TO MEET YOUR JOBSITE NEEDS

## THE MCELROY ACROBAT™ 160

The **Acrobat 160** is a low-force fusion machine for 63mm to 160mm (2" to 6") polypropylene pipe. With its small footprint and optimal weight, the Acrobat 160 allows operators to butt fuse pipe in tight indoor work environments. It is easy to manipulate whether fusing pipe overhead, in the walls or in the floors, and can be easily configured from 4 jaws to 3 jaws to access even tighter spaces.

# NEW TESTING STANDARD

The **McElroy Guided Side Bend Tester** — widely used for years — meets all the requirements in the new ASTM F3183-16 Standard Practice for Guided Side Bend Evaluation of Polyethylene Pipe Butt Fusion Joint. This tool is a great advantage on jobs using thick-walled pipe as it makes it easier to evaluate the ductility of joints in the field!

# MCELROY ON YOUR PHONE OR TABLET

## OUR NEW SITE ADAPTS TO YOUR PREFERRED DEVICE

The new McElroy website is designed to be user-friendly even on your cell phones and tablets. It may look slightly different in its presentation than it does on your PC, but all the same information is there and available at your fingertips.

Perhaps the biggest difference is in the way the menus are presented because of the smaller screens. On your desktop or larger tablets, all your menu options are in a banner stretching across the top of the page. On your phones and smaller tablets, you'll find the same links by tapping on the navigation menu in the top-right of your screen. This icon (dubbed the “*hamburger*” button) consists of three stacked lines and may look familiar to those of you who use apps on your smartphone frequently.

YOUR FRIEND ON OUR MOBILE SITE.  
THE "HAMBURGER" BUTTON.

Tapping on the hamburger button will slide out the mobile navigation menu. In this menu, you will find the same navigation links that are on the desktop version of the site. If you want to go back to viewing your page, you can hide the mobile menu by simply touching it again.

After familiarizing yourself with the side menu and seeing how it works, you will be surprised at how quickly you can explore the site or locate a specific item on your cell phones and tablets.
